Pair Programming in Scrum

by Enrico Pezzano, 4825087

What is it?

What is it?

Pair programming is when two programmers work together at one workstation.

What is it?

Pair programming is when two programmers work together at one workstation.

The end.

What is it?

Pair programming is when two programmers work together at one workstation.

The end.

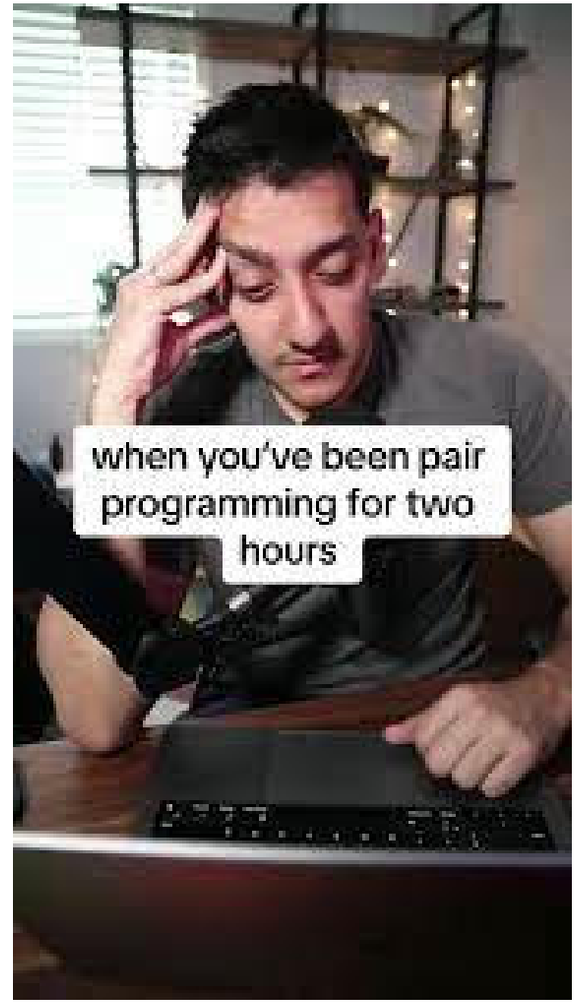

Questions?

jokes on you, I’m not actually finished

here are some more details about pair programming

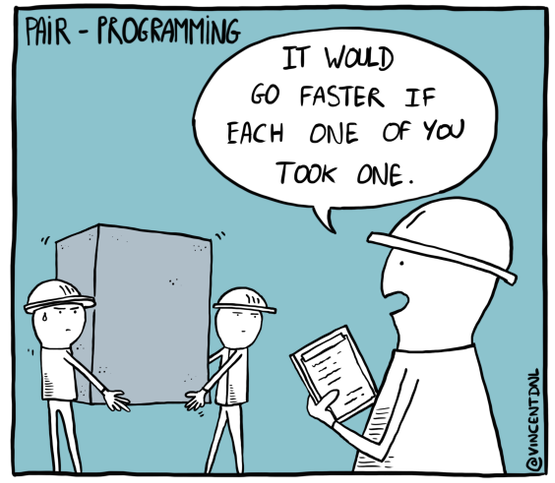

What is pair programming? (this time for real)

- the “driver”
- the “navigator”
- “mezz’orette”
- encourages collaboration and knowledge sharing
- covid trauma flashbacks :)

What is pair programming? (this time for real) 2

- Increases code quality and knowledge sharing
- Reduces bugs and improves team cohesion
- Higher productivity per line of code
- Onboarding and mentoring opportunities

Thank you!
